

I enjoy building end-to-end apps that solve real problems. I’m motivated by creating features and products that genuinely add user value, have clear monetisation channels and a potential to scale big. I’m looking for a Product Engineer role at a early to mid stage venture.

Outside of work I’m passionate about health and fitness. I enjoy reading, cooking, music, morning coffees and spending time with family and friends. I’m an animal lover, and have helped a rescue shelter in Berkshire

Portfolio

Core stack: React Native, TypeScript, Cursor IDE (AI), Expo, Firebase, Sketch App (UI / UX)

Tag: Social Video Debates

React Native, TypeScript, Cloudflare Stream, Firebase (auth, storage, firestore, functions), Cursor IDE, Expo

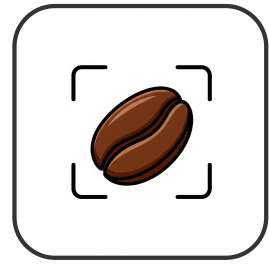

Video conversation app where users can small, political debates on specific topics. Built for fun and upskilling, but concept is in response to current toxic political discourse with the goal of more collaborative, open and good-faith discussion.

Pria: AI Project Management Platform

React, TypeScript, Python, Firebase (auth, storage, firestore), Document Intelligence, Gemini Spark, OpenGraph, VSC

Got tired of manually writing work statements into project software, so I built an AI-tool to automate the process. Also functions as a wider client management platform. Built a working prototype at FSP that got internal traction at company, but ultimately didn’t proceed.

Loyal Bean: Cafe Loyalty App

React Native, TypeScript, Firebase (auth, storage, firestore), VSC/Cursor IDE, Expo

I kept losing, forgetting and duplicating my loyalty cards which also took up excess wallet space. So I built an app for managing digital loyalty cards, using a QR scanning system to ‘stamp’ and redeem rewards. Built as final year project — marked at 86%.

Qwibbl: You’re good. They’re good.

Sketch App

Most people accumulate junk, and one person’s junk is another’s treasure. Design Qwibbl on this idiom, allowing people to trade second hand items in a more flexible and wallet friendly way using a flexi-bid system. Concept design only, created in Sketch.

Experience

FSP: M365 Consultant	09/2024 - Present
- SharePoint Online migration: Migrated 10Tb of data, 750 sites coalesced into under 500 sites, improving UX. Storage reduced by terabytes, saving cost on SharePoint storage. Created auxiliary Powershell scripts to report on project progress. Led daily standups to recap previous day and set daily agenda. Worked with an array of client stakeholders from leads to architects and project managers. SharePoint Online, PowerShell, Entra, Graph API, ShareGate were all new technologies that I picked up and got up to speed with. - Microsoft Purview data governance design and implementation. Helped design and create sensitivity labels as well as a data loss prevention policy, keeping data secure in clients M365 tenant. Wrote up full documentation single handedly with custom graphics built in Sketch app. - Assisted the Managed Services team when they were short staffed. Helped in managing ongoing service delivery and aftercare for existing clients, maintaining high satisfaction and retention.	

Higher Education: Access Course + University	09/2020 - 05/2024
Tiro Partners: Software Engineer Sourcer	06/2019 - 04/2020
Bark: Customer Support Advisor	07/2016 - 05/2019
Grant Thornton UK LLP: Systems Administrator	01/2015 - 07/2015
